Asdekor tile trims are manufactured from anodized aluminum, stainless steel and pvc various color finishes. They are used at the junctions of tile to tile or tile to non-tile covered surfaces to protect external corners and ensure smooth finish. Tile trim profiles shorten the laying time for tiles by simplifying the alignment.

Asdekor transition profiles are produced in anodized aluminum and stainless steel in various color finishes. They are used to cover the two different material joints on the floor whether there's a level difference or not. They can be applied on the floor by an invisible screw, by silicon or double-sided tape.

Movement Control Joints

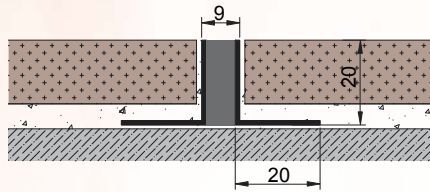

Asdekor movement control joints are produced in aluminum, stainless steel, pvc and brass. They absorb the stress caused by the system movements and prevent the cracks at wide floor coverings.

Aluminum movement control joints are manufactured in mill finish or silver anodized aluminum with EPDM.

Movement Control Joints

Please ask for stock info

EPDM Vulcanized Movement Control Joints are manufactured in aluminum, stainless steel and brass with vulcanized EPDM insert. Metal bands on both sides are joined homogenously with elastic EPDM insert by hot pressure vulcanization process. This process is considered to be the firmest joint manufacturable and prevents dust and dirt leaching in to the profile and gains the profile water & UV resistance.

MOVEMENT CONTROL JOINTS

EPDM Vulcanized Movement Control Joints

Extruded aluminium vulcanized movement control joints at 2, 3 and 5 mm heights are applied at epoxy, vinyl, linoleum and PVC coated floors. They prevent the cracking of epoxy coating and give a decorative aspect, economize the labor cost and save time during epoxy application.

Stainless steel vulcanized movement control joints in 0.8 mm thickness are highly recommended to be used in hygiene required and wet floor areas. Apart from the mechanical loads, they are resistant to chemical stress like acid or lye (e.g. strong detergents or salting the surface in winter).

Anti-Slip tape is made of abrasive minerals applied to a self-adhesive UPU carrier, for quick, durable application in many different conditions. Product can be applied onto almost any surface and instantly provides an anti-slip surface that is ready to walk on.

- 60 grit aluminium oxide surface
- Internal and external application
- Water resistant
- Used for general applications in domestic or commercial environments such as on steps, covering entire walkways

Asdekor internal profiles are manufactured in aluminium, stainless steel and pvc. They are used at the junction of the floor and walls where hygiene is required. Internal corner profiles give a decorative aspect at the corners as well as they prevent the water leakage and dirt accumulation at the corners.
