

AS A258 seismic profile can be applied with many different types of finishes (granite, marble, ceramic etc.) at different thicknesses. During the seismic based contractions, pop-up mechanism ascends the center plate without damaging the finish placed on it and gets back to origin after activity is over. Thermal expansion or contraction doesn't activate the center plate. They are ideal for the places with heavy pedestrian traffic and high earthquake risk.

Load bearing capacity designed for cars and functioning at 50 mm gap are the main differences from AS A250.

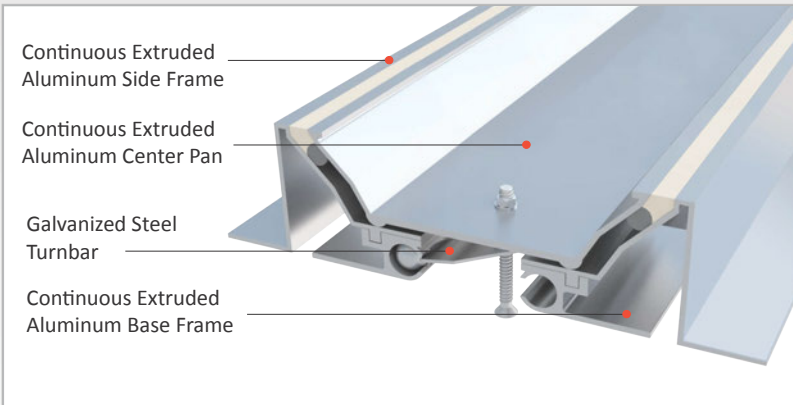

**Application Areas** : Indoor & Outdoor / Floor

**Ideal for** : Airports, Shopping Malls, Residences, Hospitals, Hotels, Public & Commercial Buildings etc. Material

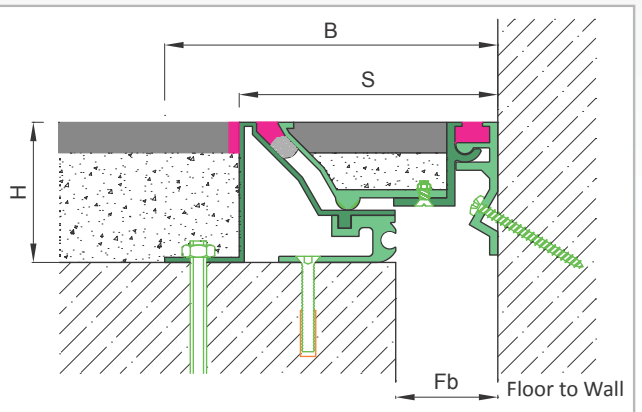

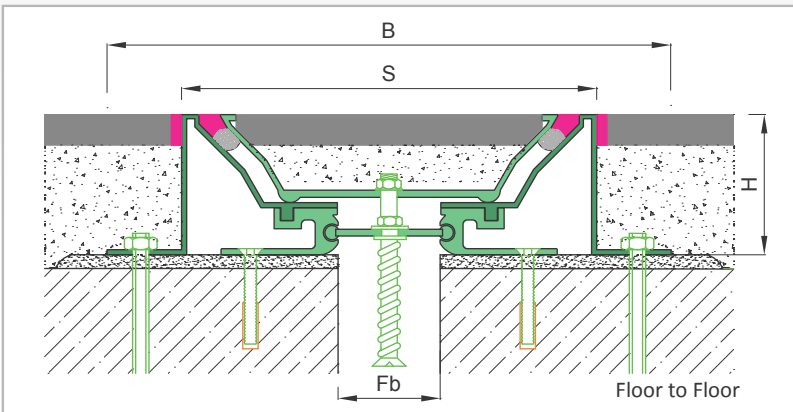

**Material** : Mill Finish Aluminum (Anodizing optional), Galvanized Steel

**Aluminum Alloy** : 6063 AA-USA / EN AW 6063

**Optional Supplies** : PE Backing Rod, PU Mastic, Fire Barrier, Waterproof EPDM membrane

**SEISMIC**

\* Visuals are representative and the profile configuration may differ depending on the characteristics requested.
